<p>A process is for repairing work gloves with a leather outer surface, which has damages in the form of cuts, holes or tears. The process uses repair material made of a mixt. of adhesive and solid filler. The material is applied on the damage and the adjoining area of the glove.</p> <p><u>ADVANTAGE</u> The process is economical and provides for flexibility of the gloves. As a result, it leads to a greater acceptance of the reuse of repaired gloves.</p> <p><u>PREF. EMBODIMENT</u> The glove area which adjoins the edge of the damage and on which repair material is applied is 3-6mm wide. The applied mixt. is paste-like and the adhesive is a leather adhesive while the filler</p>	<p>consists of leather fibres or particles. (5pp1622DwgNo.0/2)</p> <p>DE 4426783-A</p>
